DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they

do not include the following reference sign(s) mentioned in the description: 10 and 100.

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they

include the following reference character(s) not mentioned in the description:48, 58, 70, 72, 74,

76, 78, 110, and 285.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to

the Office action to avoid abandonment of the application. Any amended replacement drawing

sheet should include all of the figures appearing on the immediate prior version of the sheet,

even if only one figure is being amended. Each drawing sheet submitted after the filing date of

an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet"

pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will

be notified and informed of any required corrective action in the next Office action. The

objection to the drawings will not be held in abeyance.

Specification

On page 7, line 12, "XX/XXX,XXX" should be replaced with the appropriate serial

number.

Claim Objections

Claim 5 and 6 are objected to because of the following informalities:

"said increasing and decreasing" (claim 5, line 1), "said first defined period" (claim 6,

line 1), and "the table" (claims 5 and 6, line 2) lack antecedent basis; and

ŧ

Application/Control Number: 10/720,781 Page 3

Art Unit: 2852

"base" should be --based-- (claims 5 and 6, line 2).

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Murakami et al. (JP 2003-316177).

Murakami et al. disclose a method of maintaining a rotational velocity of an imaging drum (21) during engagement with a transfer roll (25) in an image producing device including forming a nip to transfer an image from the imaging drum (21) to media (1) when the imaging drum (21) is in engagement with the transfer roll (25). When a form (paper) doesn't exist between the photoreceptor 21 (imaging drum) and the transfer roll 25, a gear ratio is set so the transfer roll 25 is rotated at a speed obtained by adding an extent of reduction of the speed for the existence of the form (abstract, lines 9-14), which reads on maintaining a substantially constant imaging drum rotational velocity mode during engagement with the transfer roll, activating torque assist to increase the velocity of the transfer roll when the media is in the nip for a defined period, and resuming the substantially constant imaging drum rotational velocity mode while a second portion of the media is in the nip. The method includes sensing a lead edge of portion of the media prior to entering the nip. See [0021]-[0022].

Application/Control Number: 10/720,781

Art Unit: 2852

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Allowable Subject Matter

Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Other Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Calamita et al. (US 6,731,891) disclose a torque assistant for a transfer roll.

Casella et al. (US 6,421,513) disclose a torque assist system for a belt drive roller.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan Gleitz whose telephone number is (571) 272-2134. The examiner can normally be reached on Monday-Friday between 9:00AM and 6:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur Grimley can be reached on (571) 272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Art Unit: 2852

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
